

SANDHALI GUPTA

8279747947 — sandhaligupta18@gmail.com — LinkedIn

Profile

Generative AI Engineer with hands-on experience building LLM applications, RAG pipelines, voice AI systems, and workflow automation solutions. Skilled in deploying open-source and API-based models, integrating third-party services, and developing scalable AI-powered applications using modern GenAI frameworks and cloud technologies.

Education

Bachelor of Technology – Computer Science Engineering

Aug 2020 – June 2024

Vidya College of Engineering, Meerut

12th

2020

B.B.S.S.M. Inter College

Work Experience

Generative AI Engineer

MixORG Consulting Pvt. Ltd., Noida

Aug 2024 – Present

- Developed AI-powered applications using LLMs, RAG pipelines, ASR/TTS systems, LangChain, and Hugging Face.
- Deployed open-source LLMs on AWS SageMaker for scalable AI solutions.
- Integrated APIs including OpenAI, Gemini, Claude, Plivo, WhatsApp Business, and Razorpay.
- Automated workflows using n8n and built responsive web interfaces for improved user experience.

.Net Trainee

Chetu Software Solution, Noida

March 2024 – July 2024

- Built backend applications using ASP.NET, .NET Core, Entity Framework, and C# following MVC architecture.
- Implemented code-first and database-first approaches for efficient application development.

Projects

Hospital Patient Follow-up System

- Built an AI-powered multilingual voice assistant using LLMs, ASR/TTS, and FastAPI for patient follow-ups.
- Integrated WhatsApp and Plivo to automate patient interest verification and real-time voice calls using WebSockets.
- Technologies: Python, FastAPI, PostgreSQL, LLMs, Plivo API.

NLPFlow (Flowy) – No-Code AI Workflow Platform

- Built a no-code AI workflow platform for designing and executing media automation pipelines.
- Integrated OpenAI, Gemini, Deepgram, Perplexity, and other GenAI services with a scalable backend.
- Technologies: Python, FastAPI, JavaScript, PostgreSQL.

Documental – Mental Health Diagnosis Assistant

- Developed an AI-based mental health assessment system using DSM-5 criteria and LLM-powered clinical report generation.
- Implemented rule-based diagnosis workflows and FHIR standards for healthcare data management.
- Technologies: Python, FastAPI, PostgreSQL, FHIR.

Skills

Languages: Python, C#, SQL, JavaScript, OOPs

Frameworks: Flask, ASP.NET Core, Tailwind CSS, Bootstrap, HTML, CSS

Tools: Git, GitHub, n8n, WordPress

AI/ML: LLMs, LangChain, Hugging Face, RAG, Vector Databases, OpenAI, Claude, Gemini
